EDUCATION

Duke University **August 2024 - May 2028**
Bachelor of Science in Computer Science | Minors in Statistical Science and Philosophy Durham, NC
GPA: 3.95/4.00 - Dean's List with Distinction | **ACT:** 35/36 | Study abroad at UNSW Sydney (Fall 2026)
Relevant Coursework: Machine Learning, Data Structures and Algorithms, Computer Networks, Probability

PROFESSIONAL EXPERIENCE

Swoop Tutors **August 2025 - December 2025**
Go-to-Market Engineering Intern Durham, NC

- Sole engineer on a 4-person startup's first data pipeline: Clay ingestion, SQL and pandas cleaning of 10,000+ records, ICP scoring that qualified 3,000 accounts, and HubSpot and Zapier sync.
- Built a Python + React reply-rate dashboard by segment that replaced manual tracking and showed smaller consumer-industry accounts converting best, shifting who the team targeted; reported to the CEO twice weekly.
- Designed the relational schema and migration from HubSpot to a custom CRM still in use; sequential A/B tests across 5,000+ prospects reached 15% cold and 40% warm reply rates, 50 booked calls and 3 qualified demos.

AI Agents for Insurance Agencies **October 2026 - Present**
Founder Durham, NC

- Scoped the certificate-of-insurance workflow with a multi-office agency's VP, then built an LLM agent and 10-tool Python MCP server that classifies inbound email, matches the policy and drafts certificates.
- Kept the agent draft-only behind a FastAPI approval dashboard, with risk rules and a prompt-injection check in code, a hash-chained audit log, 43 unit tests and a 7-case golden eval set.

RizeMaps **June 2023 - August 2026**
Founder Chattanooga, TN

- Scaled a DTC brand to $135K lifetime revenue across 3,500+ orders; modeled landed COGS across 9 SKUs into a break-even ROAS rule per product line and lifted average order value from $55 to $90.
- Built a Python + SQLite content engine that scores 135 reels against the account's own baseline, classifies hooks and drafts weekly ad briefs under hard Meta spend caps; organic content reached 3M+ impressions.

DukeEngage Uganda **June 2025 - August 2025**
Engineer & Project Lead Kampala, Uganda

- Embedded in 4 hospitals, interviewing 20+ clinicians and scoring 40 pain points to scope the problem.
- Benchmarked 3 sensor types, wrote the Arduino-to-Python ingestion pipeline and a 5,000-reading labeled dataset, and deployed a $25 device at 98% accuracy, saving nurses 2+ hours daily.

Momnt **October 2025 - May 2026**
Co-Founder & Head of Product Durham, NC

- Ran 300+ discovery interviews, sold 300+ units ($9K+) and logged usage in Firestore with Python win-back surveys to reach 85% two-month retention; pitched 5 VCs and won $7K in startup competitions.

PROJECTS & HONORS

- **Cole OS: Shared Memory for Personal AI Agents (Python, Supabase, Git).** Built one source of truth so every agent I run starts with the same context on my projects, contacts and decisions, with per-agent write permissions enforced by a pre-commit hook and scheduled jobs capped on spend.
- **Dignity Properties Agent (Claude Code, MCP, Supabase).** Built an agentic system for a real estate firm that automates off-market deal sourcing, with a persistent memory layer of properties, owners and past decisions.
- **Scout (Python, pgvector, Docker).** Building an eval-first research agent that cites every claim to a stored source; shipped its robots-aware crawler with CI.
- **HackDuke Finance Track, 1st place of 100+ teams.** Designed the Postgres schema and LLM API data pipeline for an equity crowdfunding marketplace, shipped in under 24 hours.

SKILLS & INTERESTS

- **Agents & LLMs:** Claude Code, MCP, OpenClaw, Hermes Agents, LLM APIs, Evals, Guardrails.
- **Engineering & Data:** Python (pandas, FastAPI, pytest), SQL, Postgres, Supabase, React, TypeScript.
- **Cloud & Deployment:** Vercel, Supabase (hosted Postgres), Docker, GitHub Actions, Git, REST APIs.
- **GTM Integrations:** Clay, Apollo, HubSpot, Zapier, Twilio.
