EDUCATION

Duke University **August 2024 - May 2028**
Bachelor of Science in Computer Science | Minors in Statistical Science and Philosophy Durham, NC
GPA: 3.95/4.00 - Dean's List with Distinction | **ACT:** 35/36
Relevant Coursework: Data Science, Machine Learning, Data Structures and Algorithms, Probability, Linear Algebra

PROJECTS & HONORS

- **Founder Outreach Engine (Claude Code, Supabase, Clay, Apollo).** Built a lead-qualification pipeline that scrapes hiring signals, enriches founders, scores each against an ICP, and writes to a Supabase CRM; agents draft sequences tracked from queued to sent to replied across 46 contacts.
- **Agent Fleet & Outbound Lab (Hermes, Firecrawl, Grok).** Configured Hermes agents with Firecrawl scraping, Apollo and Clay enrichment, and a Grok bot monitoring X for founder contacts; an outbound-lab agent tests new strategies in a sandbox and can propose changes but never send.
- **Cole OS (Obsidian, Git, Supabase).** Built the memory layer for an agent fleet: a markdown vault read by 16 scoped agents with per-agent CRM permissions, plus a dashboard over agents, schedules, the CRM, and 267 postings.
- **HackDuke Finance Track, 1st place of 100+ teams.** Designed the Postgres schema and LLM API data pipeline for an equity crowdfunding marketplace, shipped in under 24 hours with Claude Code and Cursor.

PROFESSIONAL EXPERIENCE

Swoop Tutors **August 2025 - December 2025**
Go-to-Market Engineering Intern Durham, NC
- Built the first outbound GTM system for a 4-person startup end to end: Clay enrichment, SQL and pandas cleaning, ICP scoring, HubSpot and Zapier sequencing, and a reply-rate dashboard, replacing manual tracking.
- Cleaned and deduplicated 10,000+ Clay-sourced records with SQL and Python (pandas), engineering the ICP attributes that qualified 3,000 accounts into the team's first outbound pipeline.
- Designed the relational schema and SQL migration from HubSpot to a custom CRM modeling companies, contacts, and outreach activity; reported to the CEO twice weekly and the system is still in use.
- Ran sequential A/B tests on subject lines and send timing (100 sends per variant per week) across 5,000+ prospects, reaching 15% cold and 40% warm reply rates, 50 booked calls, and 3 qualified demos.

RizeMaps **June 2023 - Present**
Founder Chattanooga, TN
- Scaled a profitable DTC brand to $135K lifetime revenue across 3,500+ orders and 1,000+ reviews, 3D-modeling and printing 100+ products and lifting average order value from $55 to $90 via checkout analysis.
- Built an automated B2B outbound agent for hotels and resorts in F1 host cities: it researches and qualifies 118 target properties across 3 US race markets, verifies contact routes, and drafts race-timed first touches through 14 compliance rules and a human approval queue.
- Grew owned channels to 3M+ impressions and 13K+ followers with organic content and Meta and TikTok ads held to a break-even ROAS rule; built an engine that scores 135 reels and drafts winning ads under spend guardrails.

Momnt **October 2025 - Present**
Co-Founder & Head of Product Durham, NC
- Ran 300+ face-to-face customer discovery interviews to define the ideal customer profile, isolating weak physical enforcement and poor retention as the gaps competitors missed.
- Pitched 5 VCs on the interview-backed opportunity and won $7K across two startup competitions; converted a 200-user campus pilot into 300+ units sold and $9K+ in revenue.
- Logged per-session usage in Firestore and wrote Python to auto-survey users inactive 7+ days; features tested on a 50-user subset drove 85% two-month and 70% six-month retention.

DukeEngage Uganda **June 2025 - August 2025**
Project Manager Kampala, Uganda
- Scoped an undefined problem across 4 hospitals (20+ clinician interviews, 40 pain points scored), then built a 5,000-reading Python dataset and deployed a $25 device detecting oxygen leaks at 98% accuracy.

SKILLS & INTERESTS

- **GTM Systems:** Clay, Apollo, Firecrawl, HubSpot, Zapier, Supabase CRM, Lead Qualification, A/B Testing.
- **Agents & AI Tooling:** Hermes Agents, Claude Code, Cursor, LLM APIs, Obsidian, Git.
- **Engineering & Data:** Python (pandas), SQL, Postgres, Firestore, React, JavaScript.
